Quick intro on **ML.NET**

ML.NET...

DATA

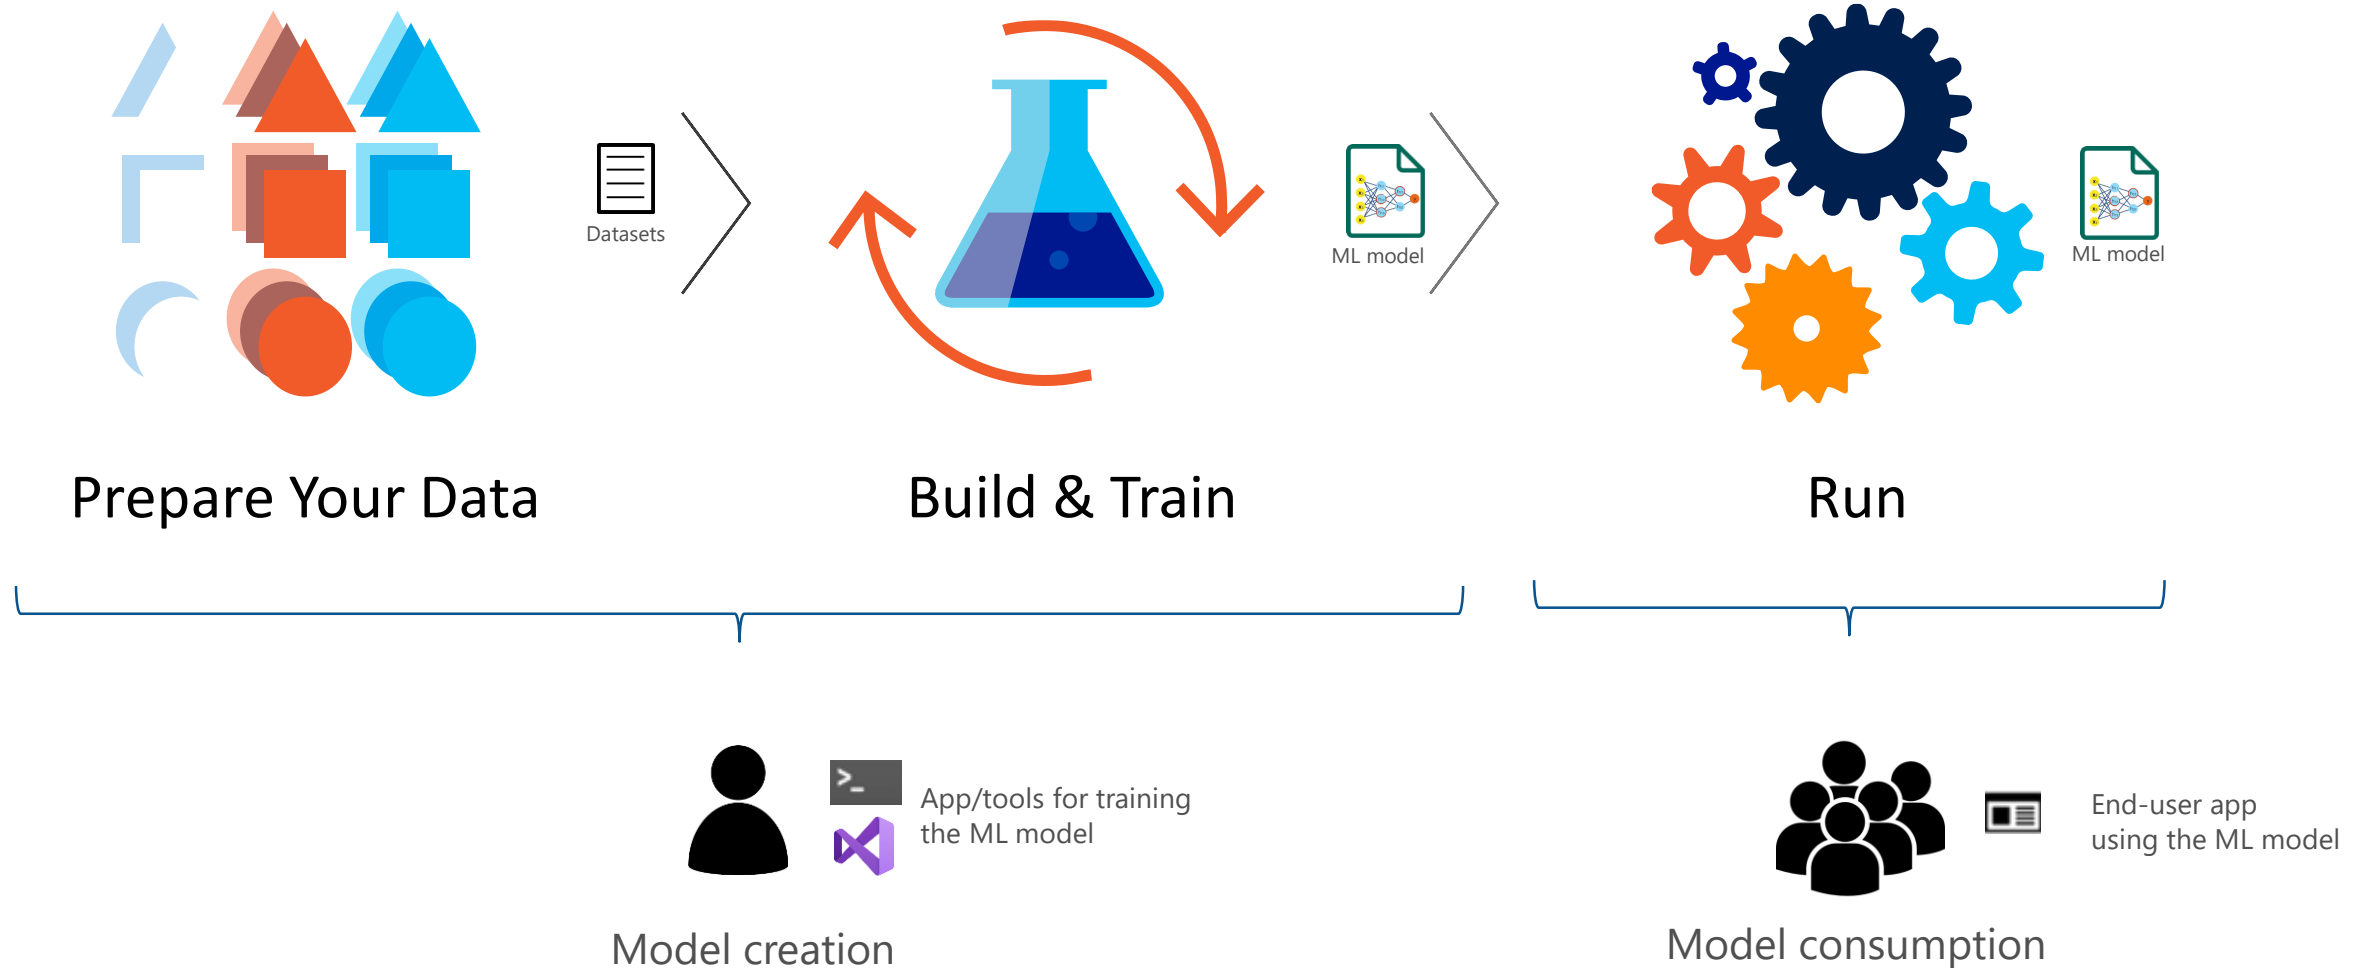

AI

MAGIC

Machine Learning Workflow

ML.NET

An **open source** and **cross-platform** machine learning framework

**Built for .NET
developers**

**Common ML made easy with
tools**

**Extended with
TensorFlow & more**

**Trusted &
proven at scale**

<http://dot.net/ml>

ML.NET runs anywhere

Supported Frameworks:

.NET Core (*Natively*)

.NET Framework (*Natively*)

Python with *NimbusML* (*Python bindings*)

Supported processor arch.

x64

x86

Three ways to use ML.NET...

ML.NET
API
(Code)

ML.NET
Model Builder
(Visual Studio UI)

ML.NET
CLI
(Command-Line
Interface)

ML.NET CLI

- Use the CLI to easily build custom ML models with Automated ML
- Cross platform (Windows, Linux, MacOS)
- Generate code for training & consumption

macOS / Linux (Bash)

```
cesard@cli-test$ mlnet auto-train --task binary-classification --dataset "yelp_labelled.txt" --label-column-index 1 --has-header false --max-exploration-time 10
Exploring multiple ML algorithms and settings to find you the best model for ML task: binary-classification
For further learning check: https://aka.ms/mlnet-cli

Best Accuracy: 87.36%, Best Algorithm: LbfgsLogisticRegressionBinary, Last Algorithm: SgdCalibratedBinary 00:00:18

=====Experiment Results=====
Summary
-----
ML Task: binary-classification
Dataset: yelp_labelled.txt
Label: Label
Total experiment time : 18.60 Secs
Total number of models explored: 48

Top 5 models explored
-----
| Trainer | Accuracy | AUC | AUPRC | F1-score | Duration | #Iteration | |
|---|---|---|---|---|---|---|---|
| 1 | LbfgsLogisticRegressionBinary | 0.8736 | 0.9386 | 0.9272 | 0.8866 | 0.1 | 12 |
| 2 | SgdCalibratedBinary | 0.8736 | 0.9348 | 0.9408 | 0.8890 | 0.1 | 34 |
| 3 | AveragedPerceptronBinary | 0.8621 | 0.9255 | 0.9181 | 0.8667 | 0.9 | 1 |
| 4 | LbfgsLogisticRegressionBinary | 0.8621 | 0.9386 | 0.9381 | 0.8788 | 0.2 | 18 |
| 5 | LbfgsLogisticRegressionBinary | 0.8621 | 0.9313 | 0.9308 | 0.8798 | 0.1 | 24 |

Generated trained model for consumption: /Users/cesard/cli-test/SampleBinaryClassification/SampleBinaryClassification.Model\MLModel.zip
Generated C# code for model consumption: /Users/cesard/cli-test/SampleBinaryClassification/SampleBinaryClassification.ConsoleApp
Check out log file for more information: /Users/cesard/cli-test/SampleBinaryClassification/logs/debug_log.txt
cesard@cli-test$
```

Windows (PowerShell and CMD)

```
Windows PowerShell
Exploring multiple ML algorithms and settings to find you the best model for ML task: binary-classification
For further learning check: https://aka.ms/mlnet-cli

Best Accuracy: 73.56%, Best Algorithm: SdcaLogisticRegressionBinary, Last Algorithm: LightGbmBinary 00:00:10

=====Experiment Results=====
Summary
-----
ML Task: binary-classification
Dataset: yelp_labelled.txt
Label: Label
Total experiment time : 10.60 Secs
Total number of models explored: 14

Top 5 models explored
-----
| Trainer | Accuracy | AUC | AUPRC | F1-score | Duration | #Iteration | |
|---|---|---|---|---|---|---|---|
| 1 | SdcaLogisticRegressionBinary | 0.7356 | 0.8122 | 0.8555 | 0.7527 | 0.3 | 13 |
| 2 | SdcaLogisticRegressionBinary | 0.7241 | 0.8048 | 0.8495 | 0.7447 | 0.5 | 2 |
| 3 | LightGbmBinary | 0.7126 | 0.7346 | 0.7818 | 0.7253 | 0.9 | 3 |
| 4 | LinearSvmBinary | 0.7126 | 0.7777 | 0.8088 | 0.7423 | 0.3 | 5 |
| 5 | FastTreeBinary | 0.7011 | 0.7569 | 0.7707 | 0.7174 | 2.1 | 6 |

Generated trained model for consumption: C:\cli-test\SampleBinaryClassification\SampleBinaryClassification.Model\MLModel.zip
Generated C# code for model consumption: C:\cli-test\SampleBinaryClassification\SampleBinaryClassification.ConsoleApp
Check out log file for more information: C:\cli-test\SampleBinaryClassification\logs\debug_log.txt
PS C:\cli-test>
```

```
> mlnet auto-train --ml-task binary-classification --dataset "customer-reviews.tsv" --label-column-name Sentiment
```

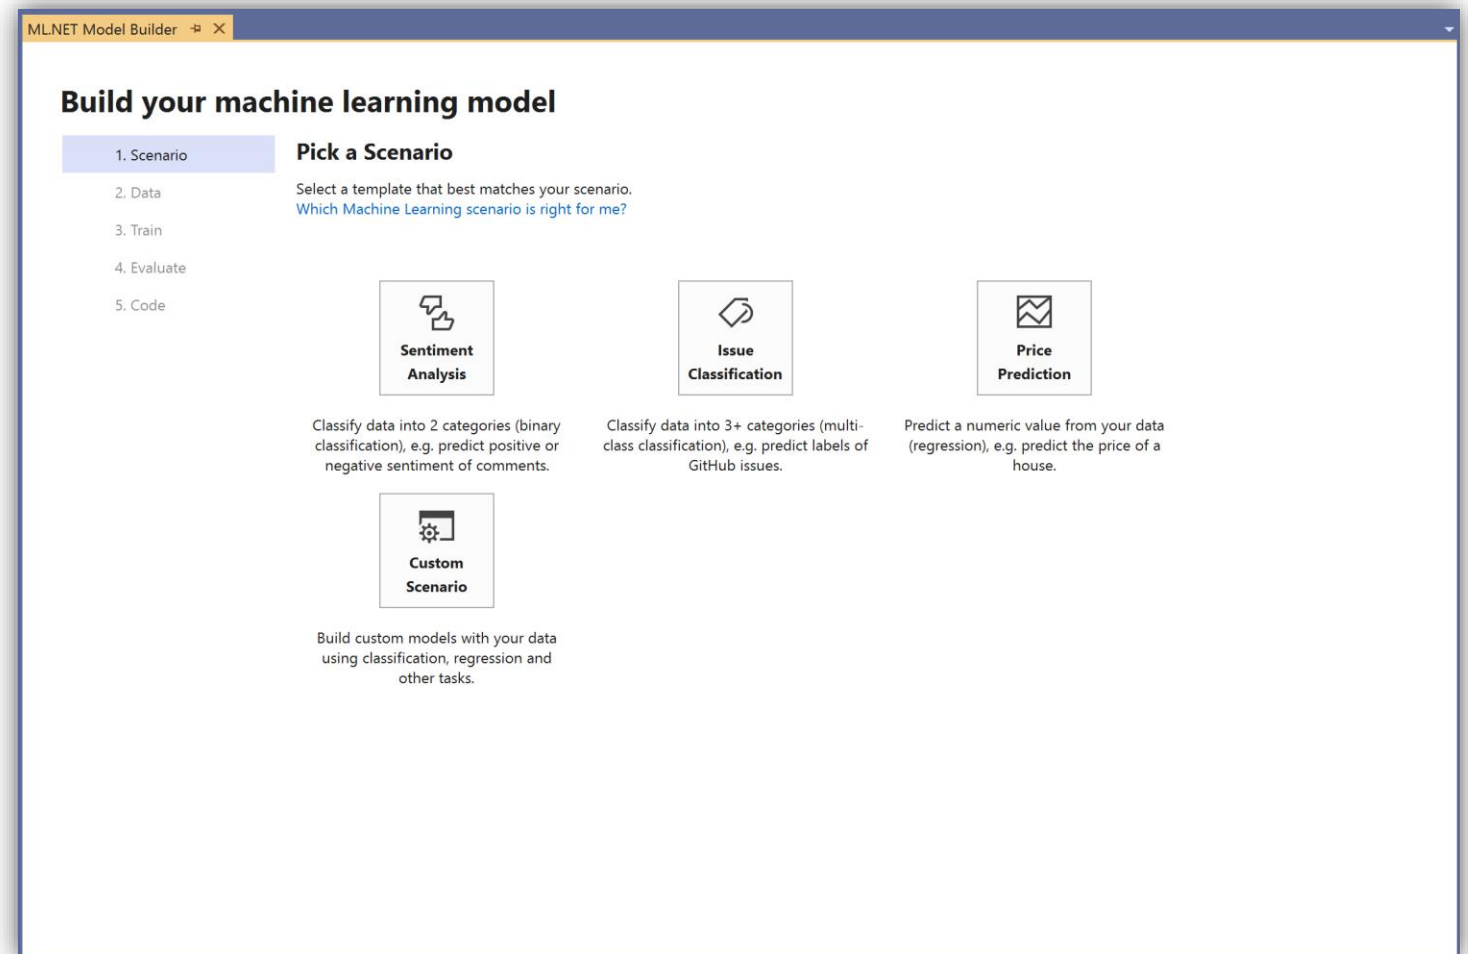

ML.NET Model Builder

Approachable machine learning in Visual Studio

- A simple UI to easily build custom ML models with Automated ML
- Load from files and databases
- Generate code for training and consumption
- Run everything local

Download VS vsix:

<http://aka.ms/mlnetmodelbuilder>

What's new for data reading: **Database Loader**

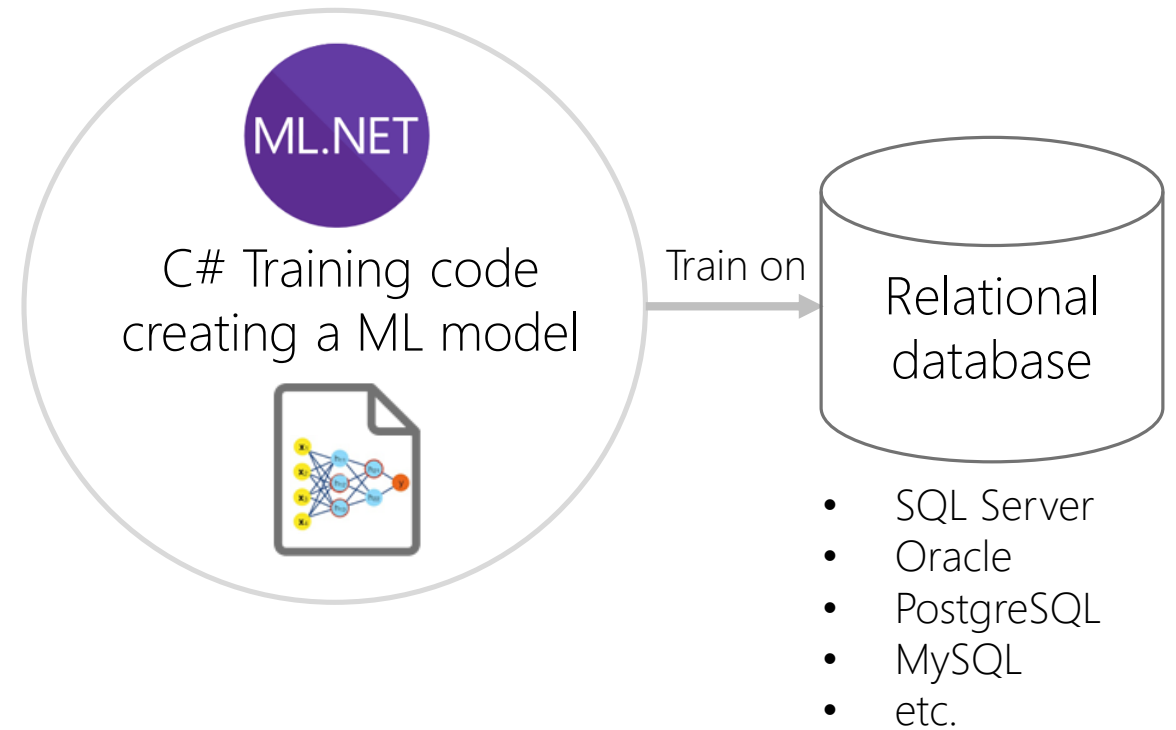

.NET

Database Loader

Enabled scenarios

- Training directly against relational databases.
- Simple and out-of-the-box code
- Supports any RDBMS supported by System.Data
- Currently in preview (1.4-preview release)

What's new for **Deep Learning in ML.NET**

Use Deep Learning models with ML.NET

- Add intelligence based on DNN-based models to your .NET apps
- Enables **computer vision** and many more Deep Learning domains

Dog

Not a dog

Leading deep learning 'pre-trained models'

(DNN architectures)

Computer Vision

Image classification

- Google InceptionV3
- Microsoft ResNet
- NASNet
- Oxford VGG Model
- MobileNetV2
- etc.

Object detection

- Yolo (You Only Look Once)
- R-CNN
- SPP-net
- Fast R-CNN
- Faster R-CNN
- etc.

Audio and speech

- Wavenet
- espnet
- waveblow
- deepspeech2
- loop
- tacotron
- etc.

NLP (Natural language processing)

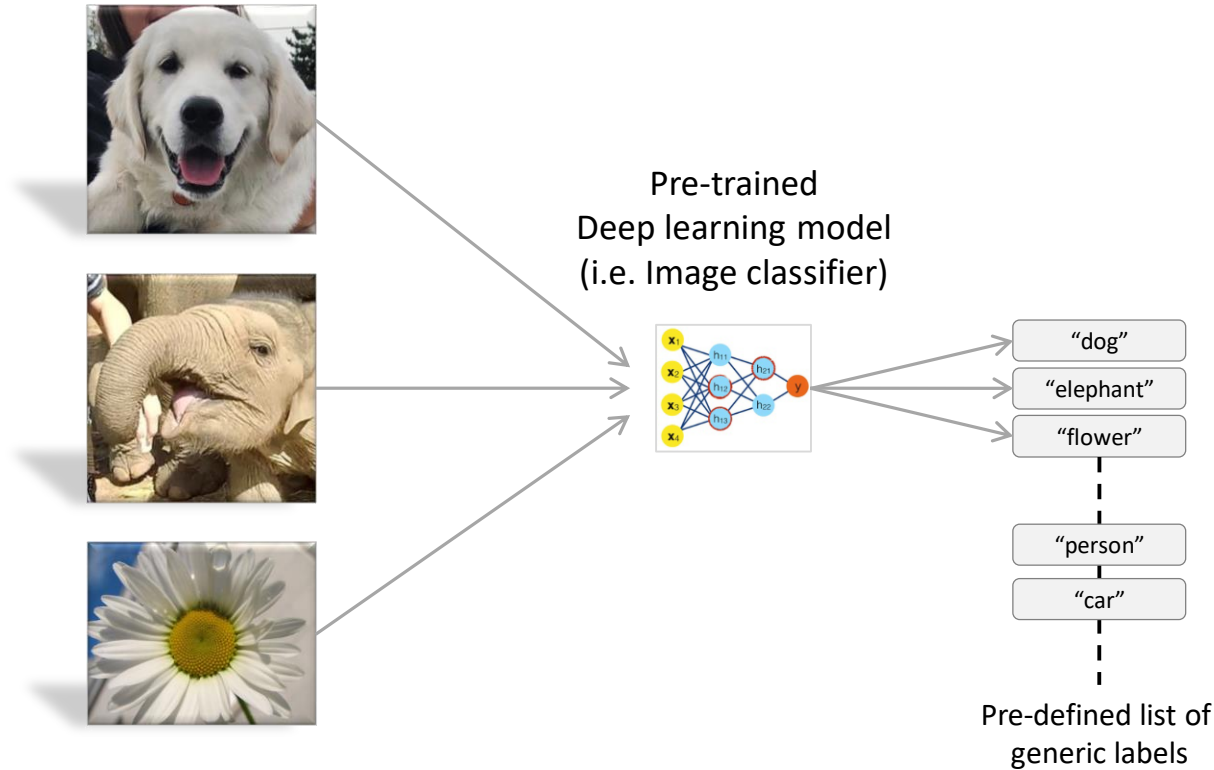

Generative Models

... other domains ...

- Huge investment/cost in DNN architecture research plus costly training on large datasets made by organizations such as Google, Microsoft, Facebook, Universities and researchers.
- You can take advantage of it by simply consuming pre-trained models

Consuming pre-trained deep learning models with ML.NET

Scenario: **Image classifier** (Consuming the model)

Examples of pre-trained models (Image classifiers):

- Google **Inception v3**, **NASNet**
- Microsoft **ResNet**
- Oxford **VGG** Model, etc.

[GitHub sample here](#)

Consuming pre-trained deep learning models with ML.NET

Scenario: **Object Detection** (Consuming the model)

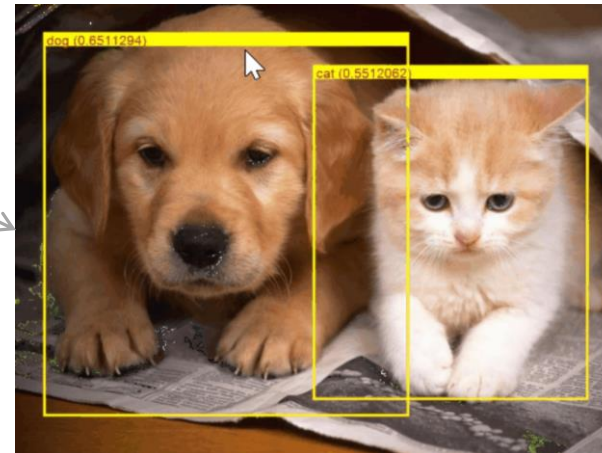

Pre-trained
Deep learning model
(i.e. Object Detection)

Examples of pre-trained
models for obj. detection:

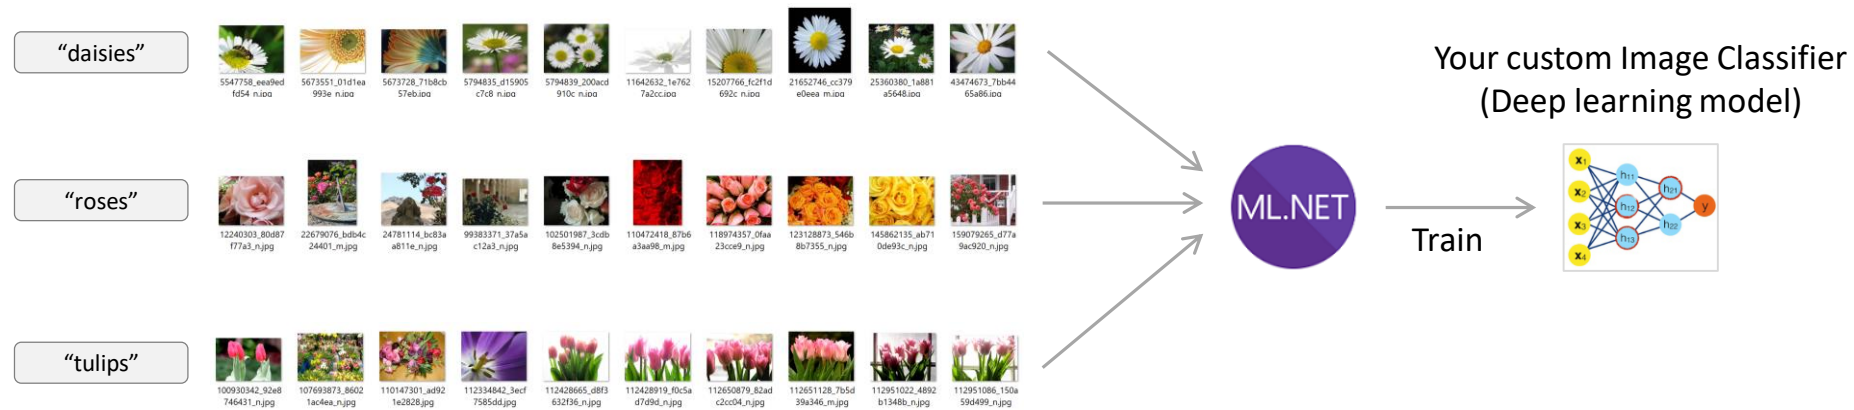

- **YOLO** (You Only Look Once)
- **Faster R-CNN**
- **SSD**, etc.

What if I want to classify based on my own custom domain?

Scenario: **Image classifier** (Training)

Then you train your own custom deep learning model with ML.NET

- When training, ML.NET is based on **TensorFlow** underneath (Transfer Learning).
- ML.NET currently supports "**ImageClassifier** training" (Preview)
 - **Object Detection** training will come soon

Transfer learning in TensorFlow with ML.NET ImageClassifier (Preview)

Simplification benefit: High level API oriented to ML Task: 'ImageClassification'

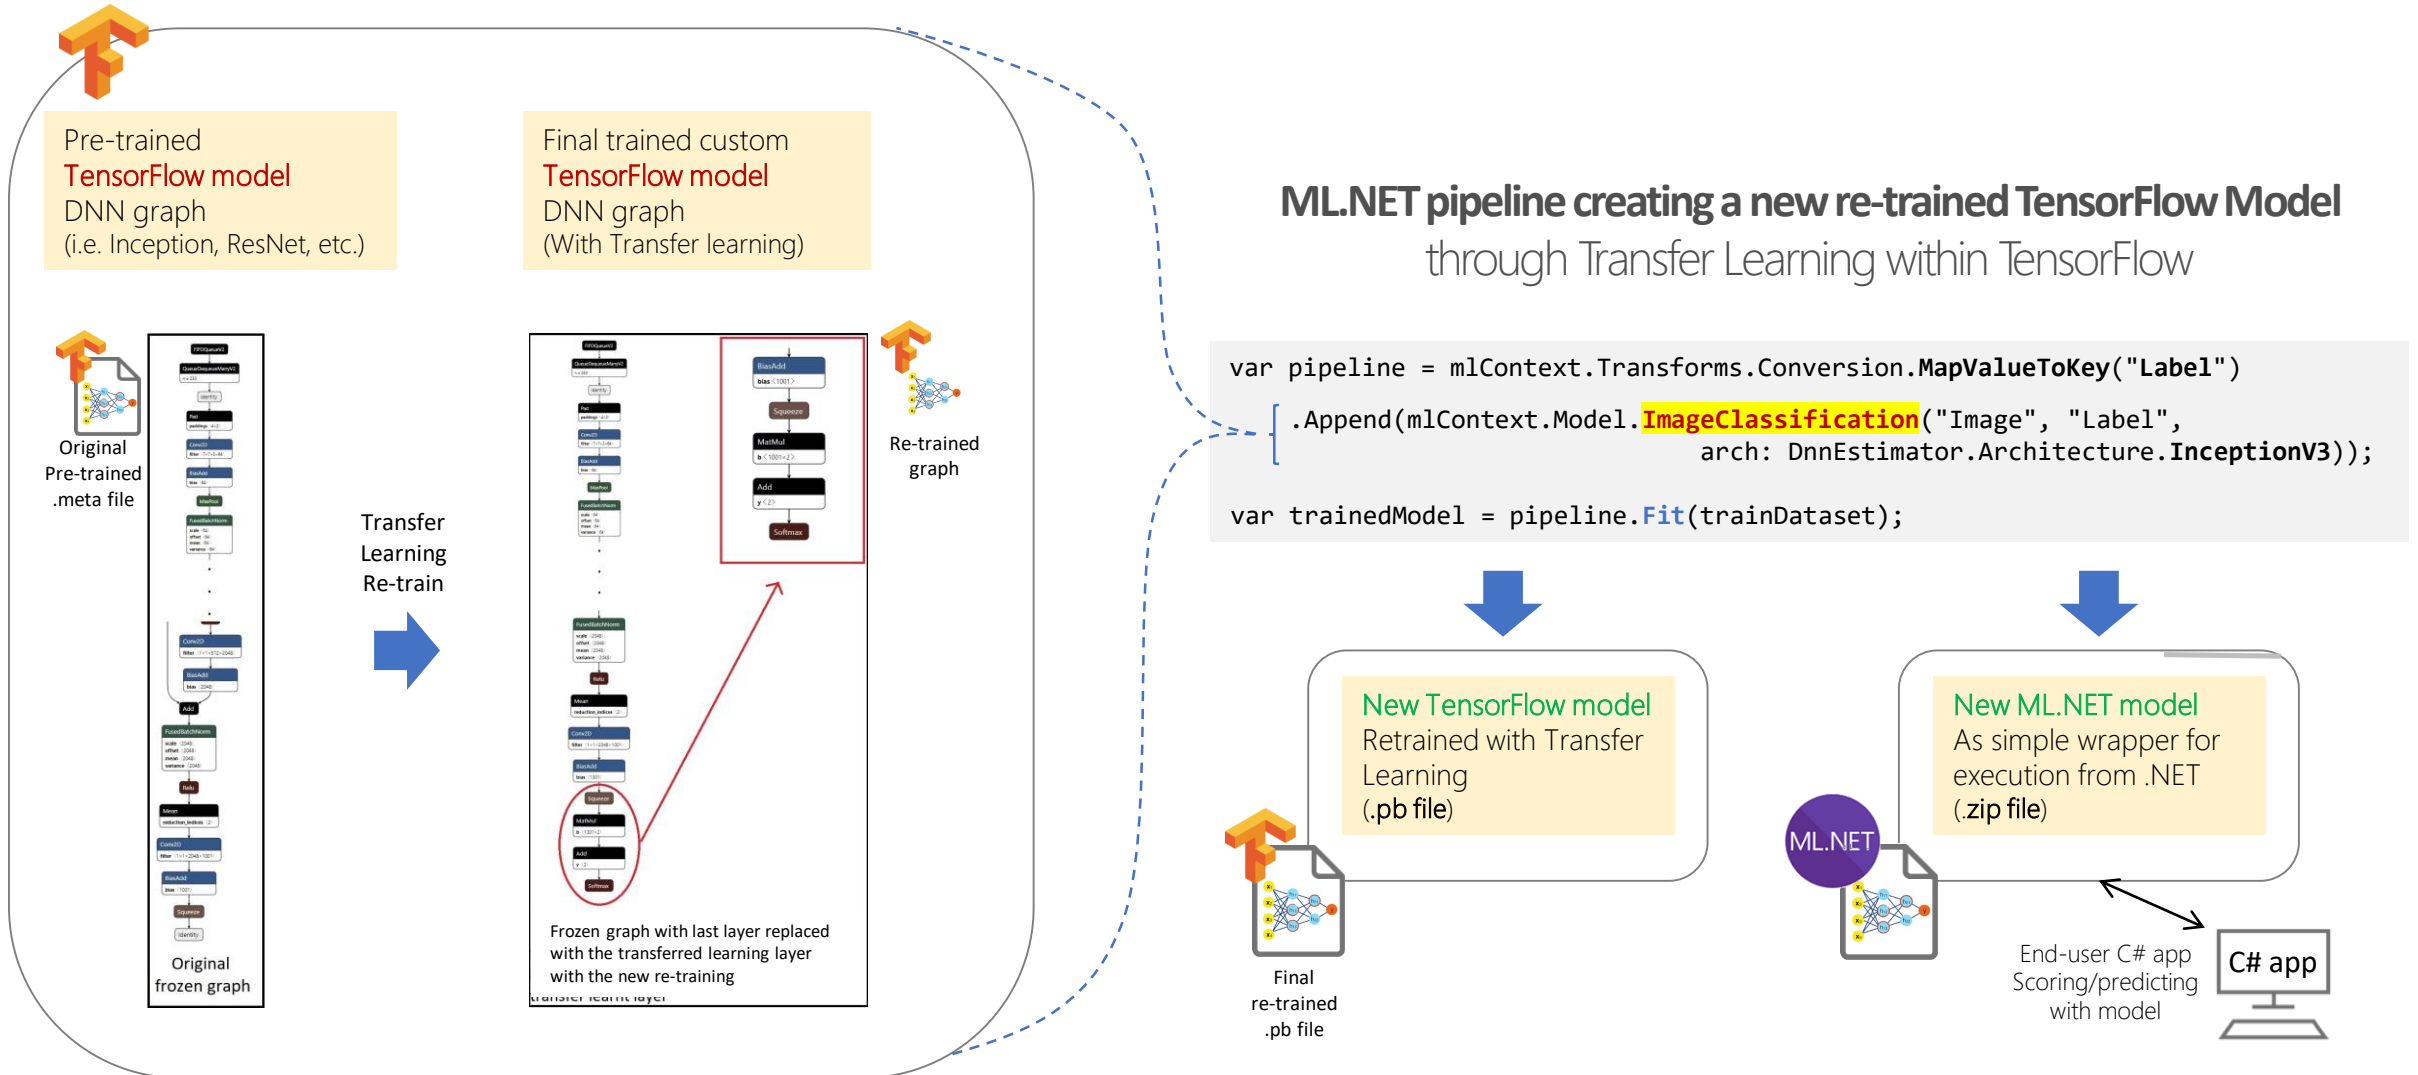

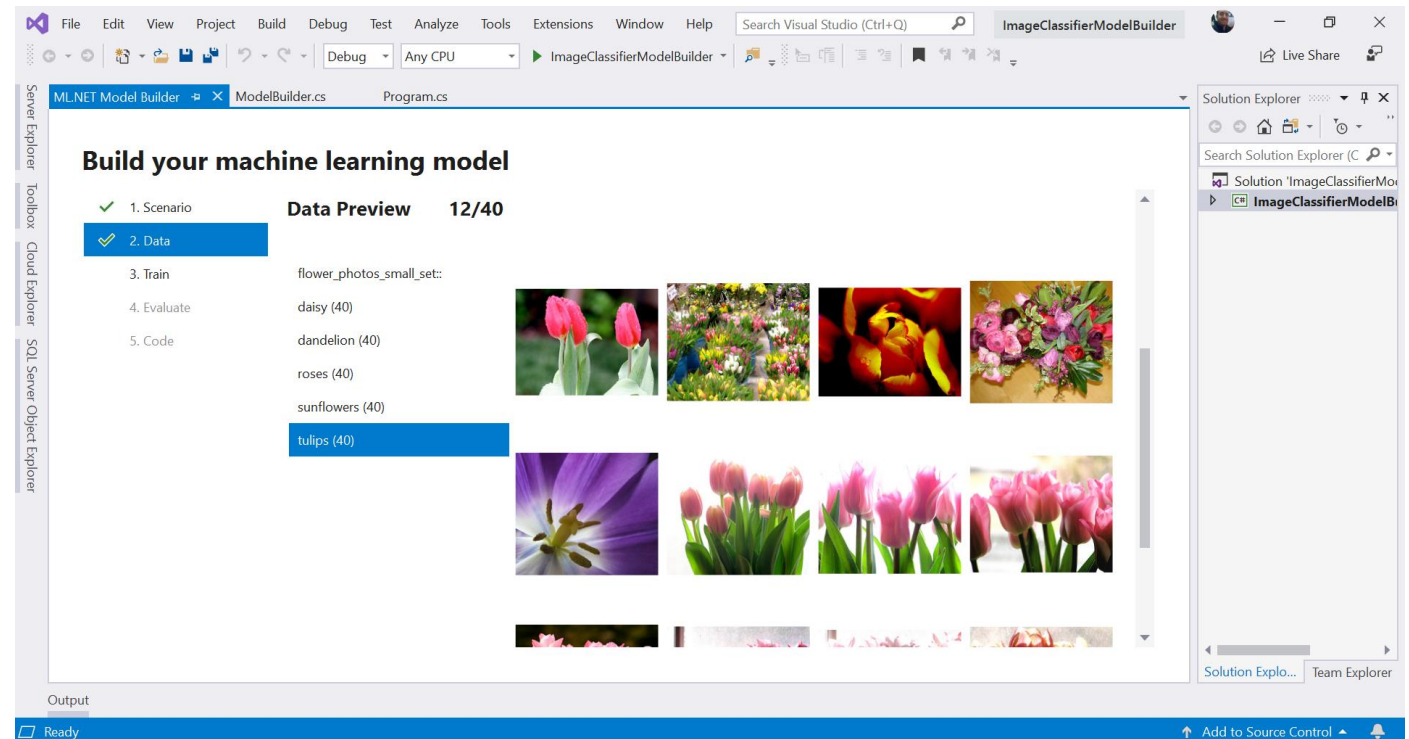

Image Classification in ML.NET Model Builder (VS extension)

- A simple UI to easily build custom ML models with Automated ML
- Directly load image folders
- Generate code for training and consumption
- Run everything local

() The Image Classifier feature in Model Builder will be public preview in upcoming releases. As of Sept. 23rd 2019 this feature is still not publicly released in Model Builder, yet. You can already use the API in public preview, though.*

More things you can do with ML.NET ...

Sentiment analysis

Analyze the sentiment of customer reviews using a binary classification algorithm.

[Sentiment analysis sample >](#)

Product recommendation

Recommend products based on purchase history using a matrix factorization algorithm.

[Product recommendation sample >](#)

Price prediction

Predict taxi fares based on distance traveled etc. using a regression algorithm.

[Price prediction sample >](#)

Customer segmentation

Identify groups of customers with similar profiles using a clustering algorithm.

[Customer segmentation sample >](#)

GitHub labeler

Suggest the GitHub label for new issues using a multi-class classification algorithm.

[GitHub labeler sample >](#)

Fraud detection

Detect fraudulent credit card transactions using a binary classification algorithm.

[Fraud detection sample >](#)

Spam detection

Flag text messages as spam using a binary classification algorithm.

[Spam detection sample >](#)

Image classification

Classify images (e.g. broccoli vs pizza) using a TensorFlow deep learning algorithm.

[Image classification sample >](#)

Sales forecasting

Forecast future sales for products using a regression algorithm.

[Sales forecasting sample >](#)
